No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 10, A Sequence 6, A Sequence 4, A Sequence 13,

Patent No. US20020133836A1
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: BOSWORTH, BEAD
APPLICANT: VOGELI, PETER
TITLE OF INVENTION: METHODS AND COMPOSITIONS TO IDENTIFY SWINE GENETICALLY
TITLE OF INVENTION: RESISTANT TO F18 E. COLI ASSOCȚATED DISEASES
FILE REFERENCE: 21419/9903844,705
CURRENT APPLICATION NUMBER: US/09/844,705
                                                                                                                                                                                                                                                                                                                                                                                                                                    APPLICANT: VOGELI, PETER

C. Atitle: Molecular cloning and expression of two types of rabbit beta-galactoside alphal Article: Molecular cloning and expression of two types of rabbit beta-galactoside alphal Article: Molecular cloning and expression of two types of rabbit beta-galactoside alphal Article: Molecular cloning and expression of two types of rabbit beta-galactoside alphal Arcession: B5632: MUID:95238380; PMID:7721792
A. Status: preliminary
A. Molecular type: mRNA
A. Residues: 1-354 < HIT>
A. Cross-references: GB:X80225; NID:9854356; PIDN:CAA56512.1; PID:9854357
C. Keywords: transmembrane protein

   galactoside 2-alpha-L-fucosyltransferase (EC 2.4.1.69) B - rat (fragment)
N;Alternate names: alpha-1,2-fucosyltransferase
C;Species: Rattus norvegicus (Norway rat)
C;Dactes: Sattus 54649
R;Piau, J.P.; Labarriere, N.; Dabouis, G.; Denis, M.G.

Title: Perfect score: Sequence:

BLOSUM62 Gapop 10.0 , Gapext 0.5

Scoring table:

Total number of hits satisfying chosen parameters: 112892 seqs, 41476328 residues Searched:

112892

Minimum DB seq length: 0 Maximum DB seq length: 200000000

Post-processing: Minimum Match 0% Maximum Match 100% ' Listing first 45 summaries

SwissProt_40:* Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Genet. 103:204-210(1998).

-!- FUNCTION: CREADED THE PROCUSE PRECURSOR OLIGOSACCHARIDE FUC-ALPHA (1,2)GALBETA-) CALLED THE H ANTIGEN WHICH IS AN ESSENTIAL SOBSTRATE FOR THE FINAL STEP IN THE SOLUBLE A AND B ANTIGEN SYNTHESIS PATHMAY. HE AND SE BUXIMES FUCOSILATE THE SAME ACCEPTOR SUBSTRATES BUT EXHIBIT DIFFERENT KM VALUES.
-!- CATALYTICA CATILYTY: GDP-L-fucose + beta-D-galactosyl-R = GDP·+ alpha-L-fucosyl-1,2-beta-D-galactosyl-R.
-!- PATHMAY: GlyCosylation.
-!- PATHMAY: GLYCOSYLAION. TYPE II MEMBRANE PROTEIN. MEMBRANE-BOUND

-!- CATALYHIG GEP-L-fucose + beta-D-galactosyl-R = GDP +
alpha-L-fucosyl-1,2-beta-D-galactosyl-R.

-!- PATHWAY: Glycosylation.

-!- PATHWAY: Glycosylation.

-!- SUBCELLULAR LOCATION: TYPE II MEMBRANE PROTEIN: MEMBRANE-BOUND
FORM IN TRANS CISTERNAE OF GOLGI.

-!- SUBCELLULAR SOCIETIY: IN THE ADDIT, HIGHLY EXPRESSED IN PANCREAS,
C-!- TISSUE SPECIFICITY: IN THE ADDIT, HIGHLY EXPRESSED IN PANCREAS,
C-!- TISSUE SPECIFICITY: IN THE ADDIT, HIGHLY EXPRESSED

-!- SUBCELLANGE STREET AND EPIDIDMALS AND TO A LESSER EXTENT IN THYMUS, LONG

-!- MISCELLANGE STREET AND EPIDIOMARS AND UTERUS. NOT EXPRESSED

IN BRAIN, HERRY, SKELETAL MUSCLE, KIDNEY, LIVER AND BONE MARROW.

-!- MISCELLANGOUS THERE ARE TWO GENES (FUII AND FUT2) WHICH ENCODE

-!- SIMILARITY: BELONGS TO THE GLYCOSYLTRANSFERASE FAMILY 11.

                                                           The present sequence was given in a specification relating to an isolated rat ganglioside GM_1-specific alphal-2fucosyltransferase protein. The protein or its cellular fraction is useful for synthesis of a molecule comprising Fucalphal-2Galbetal-3GalNAc, a glycolipid, glycoprotein, glycolipoprotein or a free oligosaccharide comprising alphal-2fucosyltransferase with GDP-fucose and a molecule or glycolipid, alphal-2fucosyltransferase with GDP-fucose and a molecule or glycolipid, glycolipoprotein or oligosaccharide having a terminal glycoprotein, glycolipoprotein or oligosaccharide having a terminal composition the protein with GDP-fucose and ganglioside GM_1. The contacting the protein with GDP-fucose and ganglioside GM_1. The contacting the protein with GDP-fucose and ganglioside GM_1. The contacting the protein with GDP-fucose and ganglioside GM_1. The contacting the protein with GDP-fucose and ganglioside GM_1. The contacting the protein and introducting an immunotherapeutic or immunosuppressive action against cancer, neurological disease or small cell lung carcinoma.

The invention relates to rat GML-specific alphal-2fucosyltransferase (alphal-2FucT) enzyme and its corresponding nucleic acid. This nucleic acid is specific for a carbohydrate moiety found in ganglioside GML, a terminal galactose betal-3N-acety/galactosamine (albetal-3GalNac) saccharide. Alphal-2FucT DNA is useful for producing rat alphal-2FucT protein by recombinant techniques. Alphal-2FucT DNA is useful for the preparative synthesis of fucosyl containing glycolipids, glycolipids, glycolipids, glycolipids, glycolipids, glycolipids, glycolipids assaying for changes in expression of alphal-2FucT DNA is useful for detecting oncogenic transformation which involves assaying for changes in expression of alphal-2FucT is activated in cell transformation, antisense sequences derived from alphal-2FucT DNA are useful for inhibiting, suppressing or treating cancer. Alphal-2FucT DNA is useful in gene therapy and alphal-2FucT DNA is useful in gene therapy and alphal-2FucT DNA is useful in gene therapy and alphal-2FucT DNA are useful in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Rat hepatoma H35 celi alphal-2fucosyltransferase, useful for producing GMJ-specific alphal-2fucosyltransferase enzyme by recombinant techniques and for detecting oncogenic transformation of test tissues .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 LGNQMGEYATLFALARMNGRLAFIPASMHNALAPIFRISLPVLHSDTAKKIPWQNYHLND 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WMEERYRHIPGHFVRFTGYPCSWTFYHHLRPEILKEFTLHDHVREEAQAFLRGLRVNGSQ 180

The protein or its cellular fraction is useful for synthesis of a molecule comprising recalphal-2Galbetal-3GalNac, a glycolipid, glycoprotein, glycolipoprotein or a free oligosaccharide comprising Fucalphal-2Galbetal-3GalNac. The method involves contacting alphal-2fucosyltransferase with GDP-fucose and a molecule or glycolipid, glycoprotein, glycolipoprotein or oligosaccharide having a terminal Galbetal-3GalNac group. It is also useful for synthesis of fucosyl-GM_1 by contacting the protein with GDP-fucose and ganglioside GML1. The obtained glycoproteins, glycolipids and oligosaccharides are useful as nutritional compositions and fucosyl-GM_1 is useful for inducing an intrinsical compositions and fucosyl-GM_1 is useful for inducing an intrinsical compositions and fucosyl-GM_1 is useful for inducing an

(alphal-2Fucr) enzyme and its corresponding nucleic acid. This nucleic acid is specific for a carbohydrate moiety found in ganglioside GM1, a terminal galactose betal-3N-acetylgalactosamine (Galbetal-3GalNAC) saccharide. Alphal-2Fucr DNA is useful for producing rat alphal-2Fucr protein by recombinant techniques. Alphal-2Fucr DNA is useful for the preparative synthesis of fucosyl containing glycolipids, glycoproteins, glycolipoproteins and oligosaccharide, and for preparing fucosyl-GM1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Rat hepatoma H35 cell alphal-2fucosyltransferase, useful for producing GMl-specific alphal-2fucosyltransferase enzyme by recombinant techniques and for detecting oncogenic transformation of test tissues

Alphal-2FucT DNA is useful for detecting oncogenic transformation which
           involves assaying for changes in expression of alphal-2 FucT. Since alphal-2FucT is activated in cell transformation, antisense sequences derived from alphal-2FucT DNA are useful for inhibiting, suppressing or treating cancer. Alphal-2FucT DNA is useful in gene therapy and antisense therapy. The present sequence is rat hepatoma H35 cell alphal-2FucT catalytic domain.
                                                                                                                                                                                                                                                                                                        185

This polypeptide comprises porcine secretor glycosyltransferase (SE or FUT2), a type II integral membrane protein has high affinity of the type I and type III substrates. Its amino acid sequence was deduced from the nucleotide sequence of a genomic DNA clone (see AAV29003) isolated from a pig liver library on the basis of homology to human FUT2 cDNA. Pig FUT2 shows 83.2% identity with human FUT2. Expression of a glycosyltransferase, such as porcine Se, in a tissue results in reduced expression of unwanted carbohydrate pancreas, rendering if more suitable for transplantation, i.e. less immunogenic and of increased immunological acceptability. A claimed method of producing a cell from a donor species that is immunogenic and of increased immunological acceptability. A claimed method of producing a cell from a donor species that is immunologically acceptable to a recipient species involves reducing levels of carbohydrate on the donor cell that causes it to be recognised as non-self by the recipient by expressing a nucleic acid for a glycosyltransferase such as porcine Se in the cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WMEERYRHIPGHFVRFTGYPCSWTFYHHLRPEILKBFTLHDHVRBEAQAFLRGLRVN3SQ 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ä
                                                                                                                                                                                                                                                                                                                               The present sequence represents pig secretor used in an example of the present invention. The present invention describes nucleic acids (NA) encoding a chimeric glycosyltransferase. The NAs comprises a catalytic domain of a first glycosyltransferase (GT) and a localisation signal of a second GT, whereby when the NA is expressed in a cell and where the compete for substrate with a second GT, resulting in reduced levels of a product from the second GT. The NAs can be used to produce cells and organs with desired glycosylation patterns. Products and methods of the present invention can be used to reduce the levels of present invention can be used to reduce the levels of undesirable transplantation or gene therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δÃ
```

```
This sequence is the human Sec2 protein of the invention. The DNA encodes a alpha(1,2) fluosyltransferase and is the Secretor alpha(1,2) fluosyltransferase locus, that cross hybridises with the H blood group alpha(1,2)fluosyltransferase gene. The DNA is useful for producing a recombinant human GDP-L-flucose:beta-D-galactoside 2-alpha-L-fluosyltransferase (FOT2) which can be used for genotyping an individual as a secretor or nonsecretor as it is known that nonsecretors homozygous for a mutant allele of the FOT2 gene that has a stop codon in the position corresponding to amino acid 143.
alpha(1,2) fucosyltransferase; H blood group; secretor genotyping;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WMEERYRHIPGHFVRFTGYPCSWTFYHHLRPEILKEFTLHDHVREEAQAFLRGLRVNGSQ 180

The protein or its cellular fraction is useful for synthesis of a molecule comprising Fucalphal-2Galbetal-3GalNAc, a glycolipid, glycoprotein, glycolipoprotein or a free oligosaccharide comprising Fucalphal-2Galbetal-3GalNAc. The method involves contenting alphal-2fucosyltransferase with GDP-fucose and a molecule or glycolipid, glycoprotein, glycolipoprotein or oligosaccharide having a terminal Galbetal-3GalNAc group. It is also useful for synthesis of fucosyl-GM.1 by contacting the protein with GDP-fucose and ganglioside GM.1 The obtained glycoproteins, glycolipids and oligosaccharides are useful as nutritional compositions and fucosyl-GM.1 is useful for inducing an increase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       3;

The functional protein is represented by amino acids 33 to 365. The enzyme produced by the DNA sequence can be used in enzymatic fucosylation of chain-terminating galactose residues on lactoseamine or neolacto type beta-D-galactoside to alpha-2-L-fucose residues.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GDP-L-fucose-beta-D-galactoside 2-alpha-fucosyl-transferase (Fuc-T) is encoded by cDNA (AAQ98461) isolated from a human epidermal carcinoma cell line. The enzyme is responsible for the synthesis of 2'-fucosyllactose, one of the oligosaccharides in human milk. Other products of Fuc-T include glycoprotiens contq. beta-linked terminal galactose residues which can be fucosylated by Fuc-T. This DNA can be used to produce non-human transgenic mammals able to produce secondary gene products, e.g. oligosaccharides, in their milk. The transgenic mammals milk biochemically resembles human milk. This humanised milk can be used in the prepn. of an enteral nutritional product useful in the nutritive maintenance of an animal.
